COPRECI

Planet Care

STOP MICROFIBRES SYSTEM

Copreci and PlanetCare sign a strategic alliance to protect the seas from microplastics

Both companies propose a solution
to stop microplastics in marine fauna.

A solution to a
global problem

Laundry without microplastic. Stop microfiber pollution now, start with your washing machine.

According to research, 6 kg of laundry releases over 700,000 microscopic plastic fibers. In five years, you will stop over 500 tons of microfibre emissions just by filtering their laundry wastewater. The same amount would fill 16 Olympic pools and weigh as much as 105 elephants.

A solution to a global problem

The current filters in washing machines do not have the capacity to retain this microfibres.

Copreci & PlanetCare promote the development, industrialization and global commercialization of a stop microfibre system for the washing machines manufacturers.

> **STOP
MICROFIBRES
SYSTEM**

**A solution to a
global problem**

60%

of textiles today are made from plastic fibers.

700,000

of plastic microfibers get released during an average load of laundry

Microplastic has been found in our food and drinking water.

Do you want to be part of the solution???
